

ALP Refugee inclusion

Claire Adida, Adeline Lo & Melina Platas Izama

7/2/2018

This document is meant to be a replicable file for any analysis conducted on the data collected by Adida, Lo and Platas Izama (ALP) in the project “Engendering empathy among Americans can promote inclusionary behavior toward Syrian refugees” (2018). This is the full dataset of 5,400 observations.

Key dependent variables are Y2 and Y6, secondary dependent variables are Y1 and *Backlash* (**survey_neg**). Below is a list of some of the most commonly used variables and short descriptions of each. Note some of the variables described below will be created in the data cleaning portion of this rmd file. For a longer description on all variables in the dataset, please see the ALP codebook.

Name	Description
Treatment_Group	Categorical variable taking values 1-6
Control	Binary variable for whether respondent was randomized Control treatment
Empathy	Binary variable for whether respondent was randomized Empathy treatment
Persuasion	Binary variable for whether respondent was randomized Information treatment
sex	Binary variable for whether respondent is female (1) or male (0)
birthyr	Continuous variable for year of birth of respondent
birthcountry	Categorical variable for country of birth of respondent
educ	Ordered categorical variable for education level of respondent (1 lowest, 6 highest)
religpew	Ordered categorical variable for Pew religion of respondent
partyid3	3-pt party ID variable, inclusive of categories for other and not sure
ethnocentric1	Continuous variable for adapted ethnocentric measure of respondent
choose_muslim	Binary variable (Y1) for whether the respondent chooses the Muslim (1) profile or Christian (0)
Y2/Y3	Respondent scale of acceptance of refugee 1/2 in each presented conjoint profile pair, from 1-7
Y4	Binary variable for whether respondent favors accepting refugee passing gov screening
Y6_new	Binary variable for whether respondent will letter to next President of US supporting refugees
survey_neg	Binary variable (Backlash) for whether the respondent wrote a negative evaluation of the survey (1) or not

Data cleaning

The original data is set up to reflect the YouGov data storage system, which requires further cleaning and arrangement before analysis. Below are pre-analysis cleaning steps.

Conjoint variables

For variables on gender, Male is coded as 1 while Female is coded as 0; 8 codes for skipped. Note **Refugee1_Attribute6** describes the country the refugee profile is from, and all refugees were designed to come from Syria.

The 1st pair of refugees are denoted by an ‘a’ after R1 or R2, 2nd pair of refugees are denoted by a ‘b’ after R1 or R2, 3rd pair are denoted by ‘c’ after R1 or R2.

data$num_muslim<-scale(data$num_muslim)

```

Respondent covariates

Retain immigrant, birthyr, race, educ, votereg (voter registration), newsint (political interest) variables. Create several different versions of variable.

```
data$info4<- data$S7# US admitted proportionally more/fewer refugees than Germany
```

Ethnocentric questions

The original measure includes 24 items, each weighted equally. For eight items, each weighted equally with 5 points each, we will consider anyone scoring above 27 as high ethnocentric and anyone scoring below 17 as low ethnocentric, which is directly scaled from the original scoring scheme.

```
data$ethnocentric1<-rowSums(data[,c("S8_1","S8_2","S8_3","s8_4","S8_5","S8_6","S8_7","S8_8")])#raw ethnocen
data$ethnocentric2<-data$ethnocentric1 #high is >27, 27>=mid>=17, 17>low
data$ethnocentric2[data$ethnocentric1<17]<-0
data$ethnocentric2[data$ethnocentric1<=27 & data$ethnocentric1>=17]<-1
data$ethnocentric2[data$ethnocentric1>27]<-2
```

Information treatment specific questions

SP1a asks the respondent if the information text is new information (note in data, this variable is called “Persuasion”). Yes is coded as a 1, No as a 0. SP1b asks respondent if they believe US resettled proportionally more, fewer or about the same refugees as other democracies such as Canada, France or Germany. More is coded as 1, Fewer as 2, and Same as 3.

```
data$persuasion_infnew<-data$SP1a
data$persuasion_infnew<-ifelse(data$persuasion_infnew==2,0,1)#recode as 1 if new, 0 otherwise.
```

Outcome variables

Outcome variables include Y1, Y2, Y3, Y4, Y6. Y1-Y3 are collected several times for each respondent. Y4 and Y6 (as well as backlash) are collected once per respondent.

```

Pew religion variables

Demeaned covariates

This section de-means covariates we will be using in the regressions in the hypotheses section. These include sex, birthyr, birthcountry, educ, religpew, partyid3, and ethnocentric1.

Treatment group variables

Long version of data

We create different stacked versions of the data to look at differences in Y1, Y2, Y3 across refugee profile pairs within respondents. We also create subsets of the data with just respondents who received either Control or Persuasion, Control or Empathy treatments, and Empathy or Persuasion treatments. (Note again, here “Persuasion” is the Information treatment.) Y1 is used in the context of analyzing the choice a respondent in preferring a Muslim profile over a Christian profile when presented with the two, so first we must reduce the data to situations where the respondent is presented with such a pair, when conducting analyses on Y1.

Save the cleaned data.

```
save.image("cleandata.RData")
```

This is the end of the pre-analysis data prep.

PAP Analysis

This section conducts the hypothesis tests specified in the Adida, Lo, Platas preanalysis plan.

We can start here with `cleandata.RData` if we like. Control variables include: gender, age, US born, education level, religion, party ID, and ethnocentrism as specified in our PAP.

```
rm(list=ls())
load("cleandata.RData")
#function for ols, calculating regression outputs with possibility for robust, clustered, robust-clustered
#from Mahmood Arai
clx <-function(fm, cluster=NULL){
  if(length(cluster)!=0){
    M <- length(unique(cluster))
    dfcw <- fm$df / (fm$df - (M -1))
    N <- length(cluster)
    dfc <- (M/(M-1))*((N-1)/(N-fm$rank))
    u <- apply(estfun(fm),2,
               function(x) tapply(x, cluster, sum))
    vcovCL <- dfc*sandwich(fm, meat=crossprod(u)/N)*dfcw
    coeftest(fm, vcovCL) }
  else{
    vcovR<-vcovHC(fm,sandwich=TRUE,type="HC")#heteroskedastic consistent cov matrix estimation, with White
    coeftest(fm,vcovR)
  }
}
#mahmood arai - just cluster
cl <- function(fm, dat,cluster){
  require(sandwich, quietly = TRUE)
  require(lmtest, quietly = TRUE)
  M <- length(unique(cluster))
  N <- length(cluster)
  K <- fm$rank
  dfc <- (M/(M-1))*((N-1)/(N-K))
  uj <- apply(estfun(fm),2, function(x) tapply(x, cluster, sum));
  vcovCL <- dfc*sandwich(fm, meat=crossprod(uj)/N)
  coeftest(fm, vcovCL) }
```

Primary hypotheses: H1a - H4b

H1a:

Respondents who receive the empathy prime will give higher admission scores (7 point scale) than those in the control group.

```

```

No statistically significant effect of persuasion on Y2; with weights however there is a slightly negative of persuasion on Y2: -0.531909, with pvalue=0.0705171. This doesn't pass the Bonferonni multiple comparisons test (which requires passing $0.05/8=0.00625$ pvalue).

H2a: (Empathy effect: letter)

Respondents receiving the empathy prime will be more likely than those in the control group to send an anonymous letter to the next President of the U.S. in support of resettling refugees.

```

Empathy effect without weights: 0.1861761, pvalue=0.0001524. This passes the Bonferonni multiple hypothesis corrections pvalue of 0.00625.

H2b: (Persuasion effect: letter)

Respondents receiving the persuasion prime will be more likely than those in the control group to send an anonymous letter to the next President of the U.S. in support of resettling refugees.

```

No longterm persuasion effect on Y2.

H4a: (Long term empathy effect: letter)

The empathy prime effect on sending an anonymous letter to the next President of the U.S. in support of resettling refugees may degrade over time, but will persist. We use the `ControlEmpathy.data` dataset, restricted to only individuals who answered the dependent variable questions in Wave 2 (`Treatment_Group==2` or `Treatment_Group==4`).

```

```

No long-term empathy effect on Y6.

H4b: (Long term persuasion effect: letter)

The persuasion effect on sending an anonymous letter to the next President of the U.S. in support of resettling refugees may degrade over time, but will persist. We use the `ControlPersuasion.data` dataset, restricted to only individuals who answered the dependent variable questions in Wave 2 (`Treatment_Group==2` or `Treatment_Group==6`).

```

No long-term persuasion effect on Y6.

Secondary hypotheses: H5a - H6b

H5a: (Heterogeneous effect of empathy and Muslim: score)

The empathy prime interacted with a Muslim refugee profile will lead to higher admission scores on average than no treatment interacted with Muslim refugee profiles. We use the `ControlEmpathy.data.y2` dataset, for wave 1.

```

No statistically significant effect of Persuasion:muslim on Y2.

H6a: (Heterogeneous effect of empathy and Muslim: letter)

The empathy prime combined with seeing Muslim refugee profiles will be correlated with a higher likelihood of sending an anonymous letter to the next President of the U.S. in support of resettling refugees, controlling for the number of Muslim refugee profiles seen. We use the `ControlEmpathy.data` dataset using the variable `num_muslims` for number of Muslim refugee profiles seen, for wave 1.

No statistically significant effect of Persuasion:num_muslim on Y6.

Additional hypotheses: robustness checks and verifications: H7a - H15c

H7a: (Y1)

Given a choice between choosing a Christian refugee profile versus a Muslim refugee profile, respondents are on average more likely to prefer the Christian refugee profile. We first subset the data `data.y1` to profile pairs where a Christian profile is compared against a Muslim profile (h7a) and use only observations from the Control group.

```

There exists a Muslim penalty – respondents in the Control group are less likely (-0.0740753) to choose a profile if it is Muslim than if it is Christian.

H7b:

Respondents will give lower admission scores on average to Muslim refugees relative to Christian refugees (“Muslim penalty”). We consider only the Control group, for wave 1.

```

We see that there is a highly significant and negative muslim effect (-0.33, pvalue=0.007275; does not pass Bonferonni correction of $0.05/11=0.004545455$). Respondents are more likely to give higher scores to Christian refugees compared to Muslim ones.

H7c:

The likelihood of respondents sending an anonymous letter to the White House is negatively correlated with the number of Muslim refugee profiles presented to them. (data, using explanatory variable `num_muslim`, wave 1).

```

```

No statistically significant effect of num_muslim on Y6.

H8a: HTE empathy with Muslim profile on Y2 over time

The heterogeneous effect of the empathy treatment with the ratings of a Muslim refugee profile compared to a Christian refugee profile may degrade in magnitude over time but will persist. We subset h7b to only respondents who answered dependent variable questions in Wave 2 (Treatment_Group==2 and Treatment_Group==4) and call this h8a.

No statistically significant effect of Empathy:muslim on Y2 in long-run.

H8b: HTE information with Muslim profile on Y2 over time

The heterogeneous effect of the persuasion treatment with the ratings of a Muslim refugee profile compared to a Christian refugee profile may degrade in magnitude over time but will persist. We subset h7b to only respondents who answered dependent variable questions in Wave 2 (Treatment_Group==2 and Treatment_Group==6) and call

this h8b.

```

No statistical significant effect of Persuasion:num_muslim on Y6.

H10a: (Heterogeneous effect of empathy and Muslim: screening)

The empathy prime combined with seeing Muslim refugee profiles will be correlated with a higher likelihood of favoring the U.S. taking in Syrian refugees who pass a government security screening relative to the control, controlling for the number of Muslim refugee profiles seen. We use `ControlEmpathy.data` for wave 1, `ControlEmpathy.data.w1`.

```

No statistically significant effect of Persuasion:num_muslim on Y4.

H11a: (Heterogeneous empathy and muslim effect: screening over time)

The heterogeneous effect of the empathy treatment and seeing Muslim refugee profiles (compared to a Christian refugee profile) on favoring the U.S. taking in Syrian refugees who pass a government security screening may degrade in magnitude over time but will persist. We use `ControlEmpathy.data.w2`.

```

No statistically significant effect of Empathy:num_muslim on Y4.

H11b: (Heterogeneous persuasion and muslim effect: screening over time)

The heterogeneous effect of the persuasion treatment with and seeing a Muslim refugee profile compared to a Christian refugee profile on the likelihood of favoring the U.S. taking in Syrian refugees who pass a government security screening may degrade in magnitude over time but will persist. We use `ControlPersuasion.data.w2`.

```

No statistically significant effect of Persuasion:num_muslim on Y4.

As indicated in our preanalysis plan, as a robustness check for our primary outcome Y2, we check whether the empathy and persuasion treatments have similar positive effects on outcome Y4 that should reasonably have some correlations with Y2. We also look at whether there is an overall reduction in discrimination on any basis in refugee pair profiles (reported differences in scores assigned to Y2 and Y3).

H12a: (Empathy effect on screening)

The empathy prime will significantly increase the respondent's reported inclusionary attitude for the U.S. taking in Syrian refugees who pass a government security screening. We use `ControlEmpathy.data.w1`.

H12b: (Persuasion effect on screening)

The persuasion treatment will significantly increase the respondent's reported inclusionary attitude for the U.S. taking in Syrian refugees who pass a government security screening. We use `ControlPersuasion.data.w1`.

H13a: (Empathy effect on difference in scores of refugee pair)

The empathy prime will significantly decrease the magnitude of the average difference in admission scores across refugee pairs (i.e. reduce discrimination on any basis). We use `ControlEmpathy.data.y2y3` and create a variable `diffy2y3` that is the absolute difference between the respondent's reported score for Y2 and for Y3 in wave 1.

```

```

No statistically significant effect on Empathy (vs Persuasion). ### H13b: (Persuasion effect on difference in scores of refugee pair) The persuasion treatment will significantly decrease the magnitude of the average difference in admission scores across refugee pairs (i.e. reduce discrimination on any basis). We use `ControlPersuasion.data.y2y3` and create a variable `diffy2y3` that is the absolute difference between the respondent's reported score for Y2 and for Y3 in wave 1.

```

```

No statistically significant difference between Empathy/Persuasion effects on screening (Y4).

H14c: (Difference between Empathy and Persuasion for writing a letter)

The empathy prime group will have a significantly different preference compared to the persuasion group toward sending an anonymous letter to the White House. We use `EmpathyPersuasion.data.w1`.

```

There is a statistically significant effect of Empathy (vs persuasion) on Y6: estimate is 0.1298184, pvalue=0.0085180 (passes Bonferonni correction: $0.05/6=0.008333333$).

H15a: (Difference between Empathy and Persuasion in long term on assigning refugee scores)

The effects of the empathy treatment on assigning higher point scores to refugee profiles will degrade significantly differently than the persuasion treatment over time. We use the `EmpathyPersuasion.data.y2.w2` dataset, restricted to only individuals who answered the dependent variable questions in Wave 2.

```

No statistically significant difference between Empathy/Persuasion effects on screening (Y4) in long term.

H15c: (Difference between Empathy and Persuasion in long term for writing a letter)

The effects of the empathy treatment on sending an anonymous letter to the White House will degrade significantly differently than the persuasion treatment over time. We use the `EmpathyPersuasion.data.w2` dataset, restricted to only individuals who answered the dependent variable questions in Wave 2.

```

```

Democrats are at a baseline 29.3% willing to write positive letters in the Control group. They're 33.4% willing to write positive letters in the Empathy group. Independents are at a baseline 19.5% willing to write positive letters in the Control group. They're 20.7% willing to write positive letters in the Empathy group. Republicans are at a baseline 5.5% willing to write positive letters in the Control group. They're 6.5% willing to write positive letters in the Empathy group.

Now just letter writing in general:

Democrats are at a baseline 29.3% willing to write letters in the Control group. They're 33.4% willing to write letters in the Empathy group. (same as above) Independents are at a baseline 19.5% willing to write letters in the Control group. They're 20.7% willing to write letters in the Empathy group. (same as above) Republicans are at a baseline 5.5% willing to write letters in the Control group. They're 6.5% willing to write letters in the Empathy group.

Time effects: Further analysis into Wave 2

From H4a and H4b we know that the empathy and persuasion effects do not persist for Y6.

From H8a and H8b we know that the Empathy-muslim and Persuasion-muslim interaction effects do not persist for Y2. From H9a and H9b we know that the heterogeneous effect of empathy/persuasion with seeing Muslim refugee profiles on Y6 do not persist.

From H11a and H11b we know that the heterogeneous effect of the Empathy/persuasion treatments with seeing Muslim refugee profiles on Y4 do not persist.

For full look at Wave 2 on Y1, Y2, Y6 for Empathy and Persuasion treatment effects:
